Discussion

On Wednesday, 11/27/02, Tom Lindsay, SSOC, spoke with Carl Spreng of CDPHE regarding the results of samples from the NE and SE corners of 207C. The data was faxed to CDPHE included gamma spec analysis of the asphalt liner and soil underneath the liner as well as total metals analysis for the soil. Samples of the liner material were sent to an offsite laboratory and results are now available, (see revised table below). Since the sludge removal operation was completed and these samples have been taken, CDPHE agreed that KH could move forward and start pushing the berms into the ponds. A summary of the data for the main COC's is provided below (Highlighted green is new data):
